

# 5 GOOD REASONS TO USE AN **ENERGY CONSULTANT**

## PLANNING

The energy consultant then starts planning the work, **measuring the impact** of different items, **estimating costs** according to the material needed, and **identifying any priority renovations**.

## MONITORING

While the work is being carried out, the energy consultant arranges **one or more site visits** to check that the materials used match the quotes signed and ensure that the grant application is complete.

## TESTING

The energy consultant starts by performing tests, **drawing up a detailed report** of your home, its energy consumption, and the savings that could be made through energy retrofitting.

## SUBSIDIES

The energy consultant organises **the collection of government bonuses and subsidies from energy suppliers**. The energy consultant first determines eligibility for subsidies and calculates an initial estimate of the amount that may be obtained, based on actual work progress and the materials used. The consultant will prepare the application for subsidies and include supporting documents..

## COMPLETION

At the end of the work, the energy consultant signs and submits the application for subsidies. **A new energy passport** is created to reflect the post-work situation. This is valid for 10 years.
