## Features

### •Secondary market:

No representation is made as to the existence of a market, but the issuer will endeavour to make a secondary market in the product, subject to it being satisfied that normal market conditions prevail. Any prices indicated will be dependent upon factors affecting or likely to affect the value of the product such as, but not limited to, the remaining time to the Redemption Date, the outstanding principal amount, the Issuer's or, if applicable, the Guarantor's credit risk, the performance and volatility of the underlying asset, interest rates, exchange rates, credit spreads, and any incidental costs. Such prices will have a bid-offer spread. The minimum size for any trade shall be the amount stipulated by the product issuer. In view of this, subscribers must be aware that they might not be able to sell their investment for amount below the specified amount.

### •Fees

Except where the product is distributed to UK retail clients in circumstances where the Distributor has provided a personal recommendation or related service as defined by the rules of the UK Financial Conduct Authority ('FCA'), the Distributor may, in connection with the offer and sale of the product, acquire the product from the Issuer at a discount to the Issue Price or at the Issue Price. If the Distributor acquires the product at the Issue Price, the Issuer may pay to the Distributor a distribution fee. Similarly, if the Distributor acquires the product at a discount to the Issue Price, a fee will be paid by the Issuer by virtue of the discounted price at which the Distributor acquired the product compared to the nominal value of the product. Such amounts may be retained by the Distributor and may be in addition to the transaction fee normally applied by the Distributor. Further information is available from the Distributor on request.

### •Minimum Subscription Amount

Holders acknowledge having been informed that the product cannot be sold by way of a public offering within or outside the European Economic Area (EEA). No action has been or will be taken in any jurisdiction that would, or is intended to, permit a public offering of the product. Each Holder undertakes to comply with the following rules:

(i) Where the subsequent Holder is located in a EEA member State, the Minimum Subscription Amount shall be an amount equal to at least EUR 100,000 or equivalent (one hundred thousand) and multiples of EUR 1,000 or equivalent thereafter;

(ii) Where the subsequent Holder is located other than in a EEA member State, the Minimum Subscription Amount shall be an amount equal to the higher of:

– the minimum subscription amount or trading size that would not, by local regulation, require the approval of a prospectus or any offering material in connection with the product; and

– EUR 1,000 or equivalent (one thousand) and multiples of EUR 1,000 or equivalent thereafter.

If a higher minimum subscription amount is stipulated in the Term Sheet prepared by the product issuer, this amount prevails over the one displayed in this document.

- **Market Risk**

The market value of a structured security may vary significantly under the influence of various factors, such as the performance level of the underlying assets, their volatility, changes in interest rates or exchange rates, particularly if the security is denominated in a currency other than the investor's reference currency, the economic and financial context of the country(ies) that is/are concerned, and the remaining duration of the security to its maturity.

For structured securities with an "issuer call" enabling early redemption, prospects of reinvesting redeemed total amounts may be unfavourable.

For structured securities linked to credit markets, the bankruptcy risk of the various issuers of the underlying bonds changes chiefly according to their quality (reflected by their rating – see issuer risk below applied to the underlying bonds) and to the macroeconomic context. The investor must be aware of the quality of the issuer(s) in which investments are made. In addition, bond prices may vary considerably between the moment bonds are issued and their maturity date. This price variation is linked to interest rate changes on the market.

- **Structuring Risk**

Structured securities being based on several complex parameters, the investor must have a perfect understanding of the mechanisms of the structured security offered and the consequences arising from the chosen redemption formula or valuation method, depending on different market forecasts and the nature of the underlying(s).

- **Issuer Risk**

The structured security is not issued nor guaranteed by BNP Paribas Wealth Management which is acting only as distributor of the security. Each investor assumes both the issuer's credit risk and the potential guarantor's risk as defined in the security legal documentation. The issuer's and its guarantor's credit ratings reflect the independent opinion of the relevant credit rating agencies and are not to be considered as a guarantee of the credit quality. In case of the issuer's bankruptcy or indeed that of its guarantor, the investor could suffer partial or total loss of the initially invested capital.

- **Liquidity Risk**

In the case of structured securities, product liquidity lies entirely in the hands of the issuer, who may or may not undertake in normal market conditions to buy or sell the security from/to the investor according to certain criteria defined at the outset (price, periodicity and minimum amount). Should he wish to exit before the maturity date, the investor may thus be unable to sell part or all of his financial asset, or may have to sell at a considerably unfavourable price. Finally, certain securities becoming relatively illiquid may face high volatility and a decline in their market value, thereby reducing the accuracy of their valuation in portfolios or even making such valuation impossible.

- **Financing**

The purchase of financial instruments by means of borrowing brings with it additional risk. On the one hand, additional guarantees (additional assets as collateral) may be required. On the other hand, the loss incurred when prices move adversely is likely to be higher than without any borrowing. Fluctuations in prices of pledged financial instruments can therefore have a negative influence on the ability to repay the loans. It is important to clearly understand that the leveraging effect produced by buying financial instruments through the means of borrowing results in proportionately greater sensitivity to fluctuations in price, and therefore offers the prospect of higher gains, but also at the same time the risk of higher losses. In summary, the higher the leverage is, the greater the possible loss can be.

- **Conflicts of interest**

Various potential and actual conflicts of interest may arise from the overall investment activities of the parties involved in the transaction, their investment professionals and their affiliates. In particular, the manager or its affiliates can offer/manage other investment vehicles which interests may be different to the interests of the holders of the securities described herein.

- **Capital Protection**

For capital-guaranteed products, the guarantee concerns the capital invested and is applicable at maturity of the product. During the life of a product, market value goes up and down depending on various elements (change in the underlying asset, volatility, change in interest rates ...). In the case of early redemption (not planned at the outset) if market liquidity so permits, the investor may bear a partial or total loss of the capital initially invested.

Furthermore, in the case of an EMTN or Certificate, the capital guarantee may not be effective if either the issuer or its guarantor defaults.

For non-capital guaranteed products, the capital invested does not benefit from any guarantee. Therefore, in the case of an unfavourable change in the underlying asset, the investor may bear a partial or total loss of the capital initially invested.
